ACTION I

To

1. Approval is requested on order #PSC-148-UNV to add a polystyrene insulator to the I.F. coils adjacent to the cover of the RR-6. Two insulators of this type are involved for each unit. The insulators will be cemented to the I.F. with a polystyrene cement.

2. Approval of this request will mean that the insulators will be added to the units at approximately set #2400. A sufficient number of insulators to cover units will be shipped to the Agency separately.

3. A price increase is requested since these parts are an additional feature not present on the production prototypes, and since the parts do perform the useful function of I.F. terminal protection against shorts to the receiver cover. The exact price increase is not available at this time but will be submitted to the Agency when the contractor's costs have been accurately determined.
